

# Tower of Pisa / Torre di Pisa

Design & Diagrams by Gerwin Sturm (2008/12/04)

I've designed this model on the train from Milano to Verbania for the CDO Convention Contest 2008.

Foil paper, at least 15 x 15 cm in size is recommended and will give a tower about 4 cm in height.

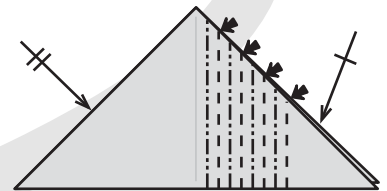

1. Waterbomb base.

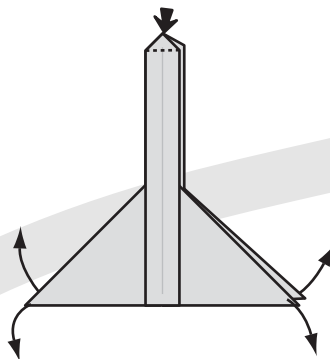

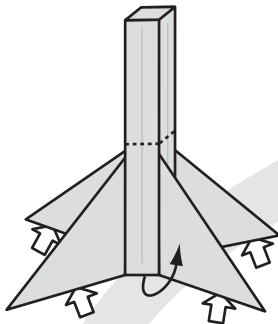

2. Fold to the center and unfold.  
Repeat on all flaps.

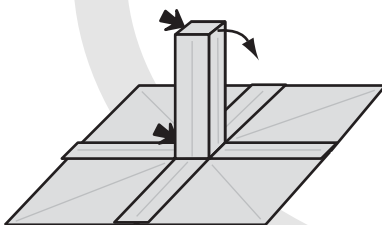

3. Precollapse into eighths.  
Repeat on all flaps.

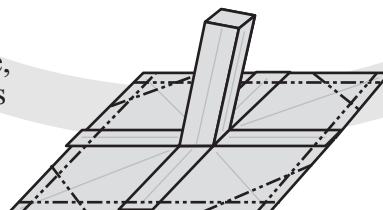

4. Reverse fold in and out  
on existing creases.  
Repeat on all flaps.

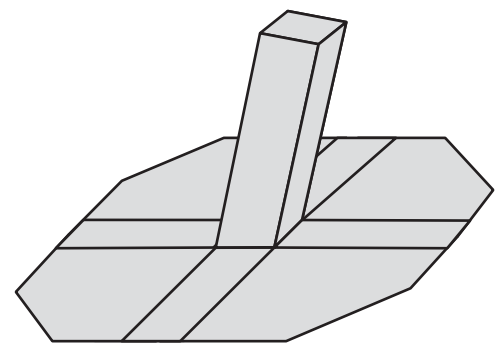

6. Open and flatten the base.

7. Lean the tower to one side,  
slightly adjusting the creases  
at the base as necessary.

8. Shape the base with  
mountain folds.

9. The finished Tower of Pisa.
